REASONS FOR ALLOWANCE

1. Claims 20-34 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The closest prior art of record does not teach, suggest or disclose a process for measuring and controlling the circulation of fluids in endoscope channels as set forth in independent claim 20, comprising:

coupling the endoscope channels to a hermetic chamber through a tank, wherein said hermetic chamber is equipped with a high and low level sensor;

filling the hermetic chamber and saturating the tank and the inlet channels of the endoscope with a fluid by a circulation pump located upstream of the hermetic chamber; and

controlling and recording a time for fluid flow in the hermetic chamber from a high level position to a low level position, and confirming that the fluids are circulated to each portion of each channel of the endoscope to ensure that the inlet channels are properly coupled to the hermetic chamber and that none of the channels are closed.

Pfeifer (U.S. Patent No. 5,738,824) discloses a process for determining the penetrability of fluids through endoscope channels comprising;

Placing the endoscope into a tank (40) and coupling the channels of the endoscope to a chamber (47) having one or more valves;

Filling the chamber and valves to saturate the tank and the inlet channels of the endoscope of a fluid; and

Determining that the fluids are circulating to the channels of the endoscope based on a penetrability test (column 3, lines 5-30). Pfeifer does not disclose that the chamber is a hermetically sealed chamber equipped with a low level sensor and a high level sensor, wherein the fluid that flows under pressure in the hermetic chamber from a designated high level position to a low level position, which is controlled and recorded in order to confirm that the fluids are circulating to each portion of each channel of the endoscope to ensure that the inlet channels are properly coupled, and that none of the channels are closed. Pfeifer also does not disclose a circulation pump arranged upstream of the chamber that is utilized to fill said tank and the inlet channels of the endoscope, and to agitate the contents of the tank.

Graf (U.S. Patent No. 5,494,530) discloses a method for controlling the circulation of fluids in endoscope channels comprising coupling one or more inlet channels to a hermetic chamber and controlling and recording the pressure in the chamber to determine if leaks are present in the apparatus (column 4, lines 43-55). Among other things, Graf does not disclose that the chamber is equipped with a low level sensor and a high level sensor, wherein the fluid that flows under pressure in the hermetic chamber from a designated high level position to a low level position is controlled and recorded in order to confirm that the fluids are circulating to each portion of each channel of the endoscope, and that none of the channels are closed.

Therefore, the closest prior art of record, namely Pfeifer (U.S. Patent No. 5,738,824) in view of Graf (U.S. Patent No. 5,494,530) does not teach, disclose, or suggest a method for measuring and controlling the circulation of fluids in endoscope

channels comprising placing the endoscope into a tank and coupling the channels to a hermetically sealed chamber that includes a high level sensor and a low level sensor, wherein the chamber and channels are saturated by a pump located upstream of the chamber; **and controlling and recording a time for the fluid to flow from a high level position to a low level position in the hermetic chamber to confirm that the fluids are circulating to each endoscope channel, and that none of the channels are closed.**

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
